# Why

## Cut-to-size over Conventional Method?

There is no doubt that cut-to-size jobs are a money saving process. It is a widely used method to customize surface project while minimizing waste during production. However, the conventional way consists of a process that involves coordination of multiple parties and therefore multiple layers of commissions, which, can bring the final cost very high.

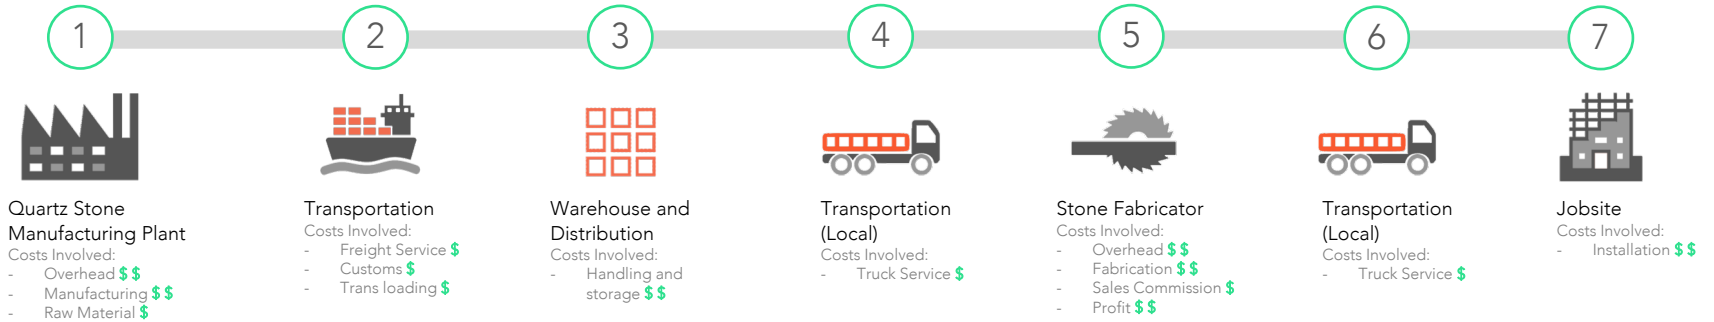

Nevertheless, our cut-to-size offers a turnkey solution that allows us to have complete control of the entire workflow process. This turnkey solution automatically eliminates multiple layers and reduces final costs significantly when compared to the conventional method.

# Workflow

Conventional Method vs Cut-to-size

## CONVENTIONAL

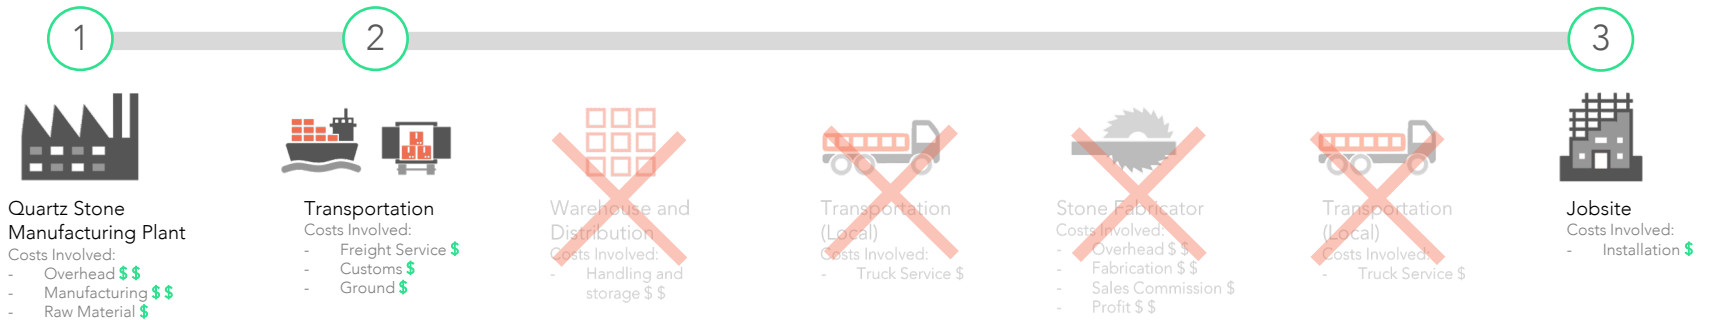

21 layers of cost \$

## CUT-TO-SIZE TEAM

CodeStones

9 layers of cost \$

SAVE TIME, MONEY, AND LABOR SIGNIFICANTLY  
21 layers of cost vs 9 layers of cost.

# Why

## Quartz over Granite?

Aesthetically pleasing with reliable technical characteristics such as flexural strength, high resistance, and durability, quartz is the best choice to create unique kitchen and vanity tops.

	QUARTZ	GRANITE
APPEARANCE	<b>Customized</b> manufactured using 94 percent ground natural quartz and 6 percent polymer resins. has the look of stone while also allowing homeowners to customize the design.	<b>Natural</b> hard stone and 100 percent natural. It's mined from quarries all around the world. Thus, comes in many different colors and patterns due to the way it's formed.
ENVIRONMENTALLY FRIENDLY	<b>Yes</b> Since its engineered (composite), does not damages the environment and requires less transportation due to regionally manufactured stone and local fabricators.	<b>No</b> The only way granite ends up in your kitchen is if its quarried, which, damages to the environment. It also involves considerable overseas transportation, which consumes more energy.
MAINTENANCE	<b>Minor</b> Only soap and water or a household cleaner is required every once in a while, but that's about it in terms of maintenance. The solid surface means that there is no need to have your countertops resealed.	<b>Considerable</b> It should be cleaned daily with soap and water or a mild household cleaner. Some oils and acids can stain so try to clean it first to avoid stains. To ensure the longevity of your investment, consider having your countertops resealed once a year.
DURABILITY	<b>Very long (years)</b> It's harder than granite and thus, more durable. It barely has a water absorption of 0.02% since it isn't porous. This also makes it easy to keep your countertops relatively bacteria-free.	<b>Long (years)</b> It's resistant to heat and many other kitchen elements. Due to its porous nature though, there can be some staining if spilled liquids are left sitting and damage can be done if your counter receives a high impact blow.

# Why Us?

Infrastructure - Technology - Teams

Infrastructure of more than 20 years of experience.

## MANUFACTURING PLANT

A 500,000 square meters state-of-the-art plant in India, making it one of the biggest production plants in the country. In fact, The factory produces 25 million square feet of composite marble and 15 million square feet of quartz per year.

World-leading polishing machines from SIMEC (Italy) with 36 polishing heads and completely automated plant capable of producing 2,000 square meters of polishing quartz everyday. Overall, the factory produces 25 million square feet of composite marble and 15 million square feet of quartz per year.

Highest quality standards.

## PRODUCT

The company's reputation comes together with the quality of its products. Thus, our stones undergo a series of quality control processes to ensure its consistency in quality and product design. Quality checks at every stage of the process ensure a fault-free product.

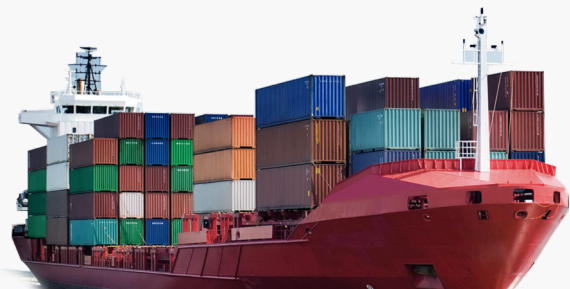

Support.  
CERTIFICATIONS

A groundwork team.

## LOGISTICS

Partnerships with world-leading freight companies and a volume of about six thousand containers per year allows us to provide a premium and seamless door-to-door solution from our plant straight to the job-site.

A platform that eliminates risks and adds trust.

## TECHNOLOGY

A unique and organized solution with multiple tools designed to manage your project in real time. Access schedules, quotes, spec sheets all in one place. Say goodbye to searching email threads and collaborate seamlessly with all parties involved.

Specialized professionals achieving a common goal.

## TEAMS

A Dedicated team of experts working in collaboration to satisfy all project needs. Our experts work in the areas of product, design, engineering, logistics, technology, and installation based on a proven work flow that allows them to make efficient and smart decisions.
